Abstract (en)

[origin: WO2022039836A1] Systems and methods for secure network communications of data are presented. Source data is provided. The source data is encrypted to produce encrypted data and key data corresponding to the encrypted data. The key data is transmitted from a first network location to a second network location. Successful transmission of the key data to the second location is verified, and upon verification, the encrypted data is transmitted from the first network location to the second network location. Successful transmission of the encrypted data to the second location is verified, and upon verification, the encrypted data is decrypted with the key data to provide a data output.
