Abstract (en)

[origin: EP3981267A1] The present invention relates to an aerosol generation device with an ejection mechanism. More specifically, an aerosol generation device (1), comprises: an aerosol generation chamber (107) configured to receive and heat a substrate (103) to generate aerosol, a cover (104) having a closed position covering the aerosol generation chamber (107), and an open position exposing the aerosol generation chamber (107), and an ejection mechanism (101) configured to be at least indirectly connected with the aerosol generation chamber (107) and the cover (104), and having an ejected state, a holding-locked state, and a holding-unlocked state.
