Abstract (en)
[origin: EP3981475A1] An atomiser nozzle which can be fluidically connected with means for supplying a high-pressure liquid (L) comprising an inlet (11) for the high-pressure liquid (L), an outlet (17) for the spray of atomised liquid and a fluidic connection line (10) extending between them. The fluidic connection line (10) comprises at least one first duct (14) fluidically connected with said inlet (11), an operating chamber (16) arranged downstream of said at least one first duct (12) and a plurality of first openings (15) for fluidically connecting the duct (14) and the operating chamber (16) configured so that the liquid (L) flowing out from the former (14) flows into the latter (16). The operating chamber (16) comprises a single outlet opening (17) with small section so that the liquid (L) flowing out therefrom is atomised liquid.
