Abstract (en)
[origin: US2022250900A1] A riding saddle having a saddle tree, a seat surface arranged thereon, and on each side of the saddle a stirrup holder fixed to the saddle, and which riding saddle is characterized in that a damping device is attached between the saddle and each stirrup holder. During the landing of a horse at the end of a jump, the damping device distributes the load by the mass of the rider applied to the stirrup holders over a period of time.
