Abstract (en)
[origin: WO2020249205A1] The invention relates to a grinding tool (1) having a replaceable grinding means (4). A grinding layer (9) of the grinding means (4) faces a drive shaft (2) of the grinding tool (1). In this manner, it is possible to grind a workpiece (W) while exerting a tensile force (F). Workpiece (W) surface regions (O) facing away from an operator can thus be machined in a simple and flexible manner.
