Abstract (en)
[origin: WO2020251463A1] The present invention relates to a process for the production of regenerated cellulosic fibers from a cellulosic spin dope, said process comprising the steps of treating a recycled cellulosic waste material to remove at least one of lignin, hemicelluloses, and contaminants from the recycled cellulosic waste material thereby providing a purified cellulosic intermediate product, dissolving the purified cellulosic intermediate product in an alkaline liquor to form a cellulosic spin dope, injecting the cellulosic spin dope into a coagulation bath to form a tow, washing and stretching the tow under alkaline conditions and/or acidic conditions, and cutting the tow to form regenerated cellulosic fibers.
