Abstract (en)

[origin: WO2020250088A1] A flat part for a knitting machine comprises: a main flat body (100) and a pair of springs (20) protruding on opposed sides of the main flat body (100) and resting against opposed surfaces (4a) of a respective groove (4) in the needle-holding cylinder (2) of a knitting machine. Each spring (20), when the flat part is inserted into the groove (4), pushes against the respective surface of the groove (4), so as to make it easier for the flat part to oscillate in the groove (4) and/or to stabilize the positioning of the flat part in the groove (4).
