Abstract (en)

[origin: WO2020253897A1] The invention proposes a tool (10) for fitting a conduit (20) onto a cable (30), having a cable-receiving portion (13) which, arranged in a first radial position in relation to a longitudinal cable axis (A), is designed for the insertion of the cable (30), and for at least partially gripping around an outer circumference of the cable (30), such that the tool can be guided along the longitudinal cable axis (A) and can be moved relative to at least the cable (30), and having a conduit-guiding portion (14), which is arranged in a second radial position in relation to the longitudinal cable axis (A), said second radial position lying outside the first radial position of the cable-receiving portion (13), and in which a portion of the conduit (30) can be arranged.
