Abstract (en)  
[origin: EP3984383A1] A smoking article (8) with a heated segment (1, 8) comprising a tobacco product. The invention relates to a smoking article (8) with a distal (22) and a mouth end (23), wherein the smoking article (8) has a cylindrical shape and is extending in a circumferential direction (24) and a longitudinal direction (25). Along the longitudinal direction (25) from the distal (22) to the mouth end (23) at least one heated segment (1, 8) comprising tobacco or reconstituted tobacco binder (RTB), at least one cooling segment (2) comprising a cylindrically shaped cooler material (9) and a filter segment (3) are arranged. The three sections (15) create a flow path (10) from the distal (22) to the mouth end (23), wherein the heated segment (1, 8), the cooling segment (2) and the filter segment (3) are at least in part enclosed by a first wrapper (4). The heated segment (1, 8) comprises at least one second wrapper (13, 14, 6). A smoking article (8) is characterized in that the second wrapper (13, 14, 6) is coated (100, 15) with a tobacco product (100, 11) comprising tobacco particles (12) having an average particle size of 30 µm and a dispersion medium for dispersing the tobacco particles.
