Abstract (en)
A roof window having a casement (3) openable to the exterior to a position parallel to the plane of the roof comprising a fixed frame (2) constituted by frame profiles (7) delineating an opening in the fixed frame (2), and an openable casement (3). The openable casement (3) comprises an openable frame (4) of the openable casement (3) constituted by casement profiles (8). In the closed position of the window each of the casement profiles (8) adjoins the respective opposite frame profile (7). The roof window also comprises two opening mechanisms (6), each of which comprises a parallelogram. The opening mechanisms (6) are mounted on two mutually parallel sides of the window for an openable connection of the casement profile (8) and its corresponding opposite frame profile (7). Each casement profile (8) on its side facing away from the opening in the fixed frame (2) comprises a protrusion. In the closed position of the window, the protrusion covers at least a part of the outer side wall (7.4) of the frame profile (7) to which the casement profile (8) adjoins, and this along at least half the length of the respective opposite frame profile (7).
