Abstract (en)

[origin: CA3186714A1] The invention relates to a base part (T) intended for producing a cartridge case and having a case base (4) for receiving a primer, wherein a peripheral extractor recess is provided on the outer circumference of the base part (T). To simplify production, it is proposed that the extractor recess has a polygonal geometry (P1, P2, P3) that is formed in cross section by a closed traverse.
