Abstract (en)
[origin: WO2020254377A1] The invention relates to a pack for a group of elongate tobacco products (10), having an inner pack (12), which is produced from a blank, forming at least bottom wall, end wall, narrow side walls and side walls of large area (rear wall, front wall), for pack contents, preferably for a group of cigarettes, and having an outer pack (11), which is produced from a blank, forming at least end wall, narrow side walls and side walls of large area (rear wall, front wall), and consists of a dimensionally stable material, in particular of coated or uncoated (thin) card and in which the inner pack (12) is stored in a linearly movable manner relative to the outer pack (11), so that the inner pack (12) can be moved (telescopically) out of the outer pack (11) via an open bottom side (13) of the outer pack (11), wherein the outer pack (11) has one or more movement limiters (38a, 38b) which interact with the inner pack (12) and limit this linear movement of the inner pack (12) out of the outer pack (11), and wherein, when the inner pack (12) is in a position moved (at least mostly) out of the outer pack (11), the outer pack (11) and the inner pack (12) are connected to each other via an in particular hinge-like pivot connection which allows the inner pack (12) to pivot relative to the outer pack (11) in a plane perpendicular to the plane of the linear movement, in particular to execute a pivot movement which moves the inner pack (12) fully out of the outer pack (11).
