Abstract (en)

[origin: WO2020254840A1] The present invention relates to a nanoclinker powder having a belite (C<sub>2</sub>S) crystalline phase as determined by powder X-ray diffraction, said nanoclinker powder having an particle size range of 2-500 nm as determined by Transmission Electron Microcopy (TEM); comprising nanobelite (C<sub>2</sub>S) particles and comprising 0-1 wt.% of CaO and 0-25 wt.% of CaCO<sub>3</sub> based on the total weight of crystalline phases in the nanoclinker powder as determined by powder X-ray diffraction. The present invention further relates to a method for its preparation, its use in a cement material and its applications in, e.g., construction and building, 3D printing and orthodontics.
