Abstract (en)  
[origin: WO2020225343A1] The invention relates to a handling device (1) for marker objects (2) that have an opening in an upper surface, comprising a substantially hollow cylindrical tube (3) with a distal tube end (31), a proximal tube end (32), and a central tube section (33) which extends between the distal tube end (31) and the proximal tube end (32), wherein the distal tube end (31) and at least one part of the central tube section (33) adjoining the distal tube end (31) can be guided through the opening in a marker object (2). The handling device additionally comprises a holding arrangement (4) which is designed to hold at least one marker object (2), said holding arrangement (4) comprising at least one latching claw (41) located in a latching claw recess (34) in the tube (3), and at least one holding claw (42) located at a distance from the at least one latching claw (41) in the direction of the longitudinal extension of the tube (3) and located in a holding claw recess (35) in the tube (3), and an operating arrangement (5) which is designed to operate the holding arrangement (4).
