Abstract (en)

[origin: WO2020260361A1] The invention relates to an industrial installation (1) and to a method for operating an industrial installation (1), in particular an installation for the metal-producing industry or the aluminium or steel industry, comprising: a production-planning system (2) for creating a production sequence, an automation system (3) for controlling the industrial installation (1) and for performing the production sequence created, a status-monitoring system (4) for monitoring one or more areas of the industrial installation (1), a quality-management system (5) for recording quality characteristics of the products produced, and a maintenance-planning system (6) for planning maintenance work to be carried out in the industrial installation (1), which is distinguished by the fact that the industrial installation (1) also comprises a central data-collecting and -analyzing unit (7), for collecting the data from the production-planning system (2), the automation system (3), the status-monitoring system (4), the quality-management system (5) and the maintenance-planning system (6) and for analyzing the collected data for optimizing the production and maintenance processes of the industrial installation (1).
