Abstract (en)

[origin: WO2020254221A1] The invention relates to a memory medium comprising communication means capable of establishing a communication with a processing unit of a vehicle and a memory (26) in which are stored: - at least two data structures (DPACK1, DPACK2), each readable by the processing unit when the communication is established; - at least two computer components (COMP) respectively associated with the two data structures (DPACK1, DPACK2); - metadata (INDEX) comprising, for each of the data structures (DPACK1, DPACK2), a reference hash associated with the respective data structure; and - a signature (SIG(INDEX)) of the metadata. A method for installing computer components in a vehicle and a method for preparing a memory medium are also described.
