Abstract (en)
Object of the invention is a multifunctional transportable container (10), such as a backpack, which comprises an upper wall (150), a lower wall (152) and side walls (40, 41, 44) and wherein two or more of the walls of the transportable container (10) are connected to each other by means of reversible closures (30, 31, 34), preferably zippers, to configure the aforesaid transportable container (10) such as to define, in a first configuration, a compartment fit to contain objects, and wherein the reversible closures (30, 31, 34) can be opened such as to separate two or more of the upper (150), lower (152) and side walls (40, 41, 44) from each other, such as to make the container (10) assume a second configuration which provides a support for resting the body, such as a bed, preferably with an incorporated extensible sunshade awning, and wherein it is possible to switch from the second configuration to the first configuration by folding the walls of the container (10) and by reconnecting them to each other by means of the reversible closures (30, 31, 34) to re-create the compartment fit to contain objects.
