Abstract (en)
[origin: CN114381838A] The invention relates to a method for warping warp threads and a sectional warping machine, in particular to a method for warping warp threads, in which a tape having a plurality of threads is supplied to a warping drum (1) by a tape supply assembly (7), the tape is fixed to the warping drum (1) and wound on the warping drum (1) with a predetermined number of turns, wherein, after reaching a predetermined number of turns, the belt is severed and a first end and a second end of the belt are formed, and the yarns of the belt are joined at at least one end. It is intended to provide a possibility that the warping can be at least partially automated. For this purpose, the threads of the belt are joined at at least one end by crimping with a crimping sleeve.
