Abstract (en)  
A drum washing machine comprises: a drum (8) provided with a washing chamber capable of independently containing washing water; a drum drainage port (16) arranged on the drum (8); a drainage sealing device mounted on the drum drainage port (16) to control the opening and closing of the drum drainage port; and a water collecting device (6) provided with a water collecting chamber (28) for collecting the washing water drained from the drum drainage port (16). The drum of the drum washing machine is of the non-hole drum, the drum (8) independently contains washing water during washing, no water exists between the drum (8) and a tub, the possibility that dirt is attached to a space between the drum (8) and the tub is avoided, user's health and user experience are greatly improved. Meanwhile, according to the structure of the non-hole drum, dewatering holes are not formed in the wall of the drum (8) any more, and only the fixed drum drainage port (16) is arranged, the water collecting device (6) is arranged to collect water drained from the drum drainage port (16), washing water in the drum (8) is drained and collected, then the washing water is drained by the water collecting device (6), and a tub arranged outside an existing drum (8) can be omitted.
