Abstract (en)	<p>Methods and systems are provided for operating an electronic checklist for an aircraft. The system includes an aviation sub-system that is part of an aircraft, where the aviation subsystem is an item on the electronic checklist. Also included is a sensor that monitors the status of the aviation sub-system with reference to the electronic checklist. An onboard computer system monitors the electronic checklist and determines the status of the aviation sub-system as required by the electronic checklist along with the operational condition of the sensor that monitors the status of aviation sub-system. Finally, a graphical display shows the status of the aviation sub-system and the operational condition of the sensor.</p>
