Abstract (en)
[origin: WO2020261130A1] A brake operating arrangement (18) comprises a cam member (22) operable on a brake mechanism (36) for braking a wheel (34). The brake mechanism (36) is movable between a braking condition and a non-braking condition. The cam member (22) is rotatable to move the brake mechanism (36) to the braking condition. The brake operating arrangement (18) further includes a drive member (44) movable in drive and return directions; and a ratchet mechanism (46) to rotate the cam member (22) when the drive member (44) is moved in the drive direction. The ratchet mechanism (46) is connected to the drive member (44) and the cam member (22).
