Abstract (en)
[origin: WO2021001223A1] The invention relates to a texturing machine for drawing and crimping synthetic threads, comprising a plurality of processing points. Each of the processing points has multiple delivery mechanisms (3, 7, 19), multiple treatment devices (4, 5, 6, 10) and a winding device (21) for winding a reel. A pneumatic auxiliary device (11) having multiple guide tubes (12.1, 12.2) and multiple injectors (13.1, 13.2) is provided for threading a thread at the beginning of the process or in a process interruption, wherein the auxiliary device (11) cooperates with a suction device (22) associated with the winding device (1) via a blowing end (15.1, 15.2) of one of the guide tubes (12.1, 12.2). In order to create the shortest possible transfer sections, the suction device (22) comprises a swivellable suction nozzle (22.1), which can be positioned at a short distance opposite the blowing end (15.1, 15.2) of the guide tube (12.1, 12.2) for receiving the thread.
