Abstract (en)

[origin: WO2022037769A1] The invention relates to a locking device for a container or lid (2), in particular of motor vehicles, which can be actuated between an open and closed position in relation to a housing part (1), which locking device has a gate (3) and a guide pin (4) which engages in the gate (3) and is located on a pivotably mounted lever (5). The gate (3) has an inclined surface (9) along which the pin (4) slides, under the influence of exterior acceleration forces, in the direction (16) of a stop (7) located on the container or lid (2), in order to bring the lever (5) into a position in which the movement of the container or lid (2) is blocked.
