Abstract (en)

[origin: WO2020261309A1] High energy efficiency door or window (10), configured to be attached in an opening (11) of a wall (12) of a building (13), comprising a fixed part (18) configured to allow the articulation, or the sliding, with respect thereto, of at least one mobile element (19), between a position in which the opening (11) is closed and at least one position in which the latter is open. The fixed part (18) comprises an anchoring member (25) which is attached, at least partly, to an external part of the fixed part (18) and is configured to be attached to the surfaces that define the opening (11) already during the production step of the wall (12), before the latter is finished.
