Abstract (en)

[origin: WO2020259992A1] The invention relates to a method for aligning digital maps, particularly by a control unit, wherein data of a first map arranged in a first coordinate system and data of a second map arranged in a second coordinate system are received, at least one trajectory within the first map and at least one trajectory within the second map are determined using the data received, and wherein the data from the first coordinate system and the data from the second coordinate system are aligned with each other on the basis of the respective trajectories. The invention furthermore relates to a transfer arrangement, a control device, a computer program and a machine-readable storage medium. G01C 21/32, 21/00
