Abstract (en)

[origin: WO2020259932A1] The invention relates to a method, to a computer program with instructions, and to a device for processing data detected by a motor vehicle. The invention additionally relates to a motor vehicle and to a back end in which a method according to the invention or a device according to the invention is used. In a first step, a piece of data detected by a motor vehicle is received (10). A temporal obfuscation is then applied (11) to the received piece of data. In the process, a temporally segmented obfuscation interval is used for the temporal obfuscation. The obfuscated piece of data is finally forwarded (12) for further processing. The temporal obfuscation can be carried out within the motor vehicle or in a back end connected to the motor vehicle.
