Abstract (en)

[origin: WO2021001572A1] The invention relates to a device and a method for transporting a nonwoven, having two endlessly circulating belts, preferably during the production of composite boards from a spread pressed-material mat, wherein, in the device for transporting a nonwoven (1), a first belt (3) and a second belt (4) are arranged such that the underside (12) of the nonwoven (1) is transported in a transporting direction (10) in a manner resting on the belts (3, 4), and wherein a transfer gap (9) is formed between the first and the second belt, characterized in that a transfer device (2) for transporting the nonwoven (1) is arranged in the region of the transfer gap (9). The invention also relates to a method for starting up or shutting down such a device.
