Abstract (en)
[origin: WO2021043592A1] A portable U-lock comprises a lock body, which houses an electromechanical locking mechanism, and a shackle, which has at least one locking section that can selectively be introduced into the lock body or released from the lock body, wherein the locking mechanism comprises at least one latch and an electric motor for driving the latch, and the latch is designed to lock the shackle locking section inserted into the lock body to the lock body in a locking position and to release the shackle locking section for removing from the lock body in a release position. The electric motor is designed to move the latch selectively out of the locking position and into the release position via a drive transmission section of the locking mechanism, and the lock body has a watertight casing which surrounds the electric motor.
