Abstract (en)

[origin: WO2021000983A1] The invention relates to a drive train unit (1) for a drive train of a motor vehicle, with an input component (2) for the introduction of a torque, a torsion damper (3) which is connected in a torque-transmitting manner to the input component (2) for damping rotational non-uniformities, and an output component (4) which is connected in a torque-transmitting manner to the torsion damper (3) for outputting the torque, wherein the output component (4) is arranged radially further to the outside than a spring element (5) of the torsion damper (3), wherein the torsion damper (3) is connected to the output component (4) via an intermediate hub (6) which acts on a radial inner side of the torsion damper (3).
