Abstract (en)
[origin: WO2021001616A1] Luminous signalling device for a vehicle and in particular for a motor vehicle, said device comprising: - a casing that is open at the front, i.e. that opens onto the exterior when the device is mounted on a vehicle, - at least one light source (SOL) placed inside the casing (BOI), - an outer lens (GLA) corresponding to a partition suitable for closing the casing, and - at least one luminous element (ELU) suitable for scattering light generated by said light source (SOL), characterized in that the luminous element (ELU) is over-moulded on a portion (PGL) of the outer lens, so as to form an integral optical element (IOE): the outer-lens portion (PGL) corresponding to the exterior face of the integral optical element (IOE), and the luminous element (ELU) covering the interior face of the outer-lens portion (PGL) corresponding to the interior face of the integral optical element (IOE).
