Abstract (en)
[origin: WO2021004797A1] The present invention concerns a method and a device for coding a sequence comprising at least a first digital hologram (H1) representing a first scene and a second digital hologram (H2) representing a second scene, the first digital hologram (H1) and the second digital hologram (H2) being represented by means of a set of wavelets each defined by a multiplet of coordinates in a multidimensional space. The first hologram (H1) is represented by a set of first coefficients ($c_1(k,s,X)$) respectively associated with at least some of the wavelets of the set of wavelets, and the second hologram (H2) is represented by a set of second coefficients ($C_2(k',s',X')$) respectively associated with at least some of the wavelets of the set of wavelets. The coding method comprises the following steps: - for each of a plurality of second coefficients ($C_2(k',s',X')$), determining a remainder (lk',s',X') by a difference between the second coefficient concerned ($C_2(k',s',X')$), associated with a first wavelet defined by a given multiplet ((k',s',X')), and the first coefficient ($c_1(k,s,X)$) associated with a second wavelet defined by a multiplet ((k,s,X)) having as its image the multiplet ((k',s',X')) given by transform (G_i) in the multidimensional space; - coding the determined remainders (lk',s',X'). The transform (G_i) is determined by analysis of variation between the first scene represented by the first digital hologram (H1) and the second scene represented by the second digital hologram (H2).
