Abstract (en)  
[origin: WO2021002859A1] According to an example aspect of the present invention, there is provided a method comprising, receiving, by a wireless device from a network node, a broadcast message indicating a request to store measurements in at least one of an idle mode and an inactive mode; storing, in response to the request, measurements performed in at least one of the idle mode and the inactive mode; and transmitting, to the network node, a measurement report comprising said measurements when entering connected mode from the idle mode or the inactive mode.
