Abstract (en)

Provided are a flavor inhaler and an insertion guide member which have novel structures. Provided is a heating assembly. The heating assembly comprises a heating portion extending in a first direction and configured to heat a flavor generating article, a heat insulating portion extending in the first direction and located away from the heating portion in a second direction orthogonal to the first direction, and a partition wall disposed in at least either one of first and second end portions of the heating portion and configured to block fluid from exiting through a gap between the heating portion and the heat insulating portion.
