Abstract (en)

The invention relates to a system is provided that comprises a first container, a second container and a fluorescence detection device. The first container comprises a first set of chemicals and/or agents and is closed prior to use. The second container comprises a second set of chemicals and/or agents that are at least in part distinct from the chemicals and/or agents of the first set. The first container comprises a lid, that can be opened when the first container and the second container are combined to form a single, fluid tight assembly, in order to allow the contents of the first container to enter the second container.
