Abstract (en)
This disclosure relates to an electronically operated door lock (2) comprising a cylinder assembly (11) in turn comprising a housing (15), a cylinder (16) rotatably mounted in the housing (15) and provided with a cam (19) to drive a bolt (8; 9), e.g. a bolt (8; 9) in a lock case (3), an electromechanical actuator (40) to rotate the cylinder (16) and cam (19), and a door knob (17) to manually rotate the cylinder (16) and cam (19). The lock comprises a clutch (50, 51) that by manual rotation of the door knob (17) disengages the electromechanical actuator (40) from the cylinder (16) and engages the door knob (17) and the cylinder (16) or, if the two are already engaged, maintains engagement between the door knob (17) and the cylinder (16).
