Abstract (en)

[origin: WO2021053230A1] The invention relates to a closing apparatus (1) comprising a first closure part (3), which has a first insertion portion (31) and a first magnet arrangement (35), a second closure part (4), which has a second insertion portion (41) and a second magnet arrangement (45), and a housing module (2), which has two insertion openings (200, 201), a third magnet arrangement (25) and an actuation assembly (28). For connection to the housing module (2), the first closure part (3) can be plugged by the first insertion portion (31), with magnetic attraction of the first magnet arrangement (35) to the third magnet arrangement (25), and the second closure part (4) can be plugged by the second insertion portion (41), with magnetic attraction of the second magnet arrangement (45) to the third magnet arrangement (25), into one each of the insertion openings (31, 41) with both closure parts being interlockingly connected to the housing module (2) in a closed position. The actuation assembly (22) can be operated for releasing the first closure part (3) and the second closure part (4) from the housing module (2). Here, the first closure part (3) and the second closure part (4) can be inserted into each of the insertion openings (200, 201).
