Abstract (en)

[origin: WO2021008670A1] The device for evaporating volatile substances comprises a container (1) housing a liquid with the volatile substances, and wick (2) in contact with said liquid and extending outside said container (1), wherein the device also comprises a porous element (3) placed inside the container (1) that is impregnated with said liquid with the volatile substances. The presence of the porous element inside the container permits to place the evaporation device according to the present invention in any suitable position, preventing the leakage of the liquid and still allowing its correct performance.
