Abstract (en)

[origin: WO2021004562A1] The invention relates to a guide vane segment (40) for a gas turbine (10), in particular an aircraft gas turbine, comprising: at least one guide vane (46); a radially inner cover strip (44); and a radially outer cover strip (42), the at least one guide vane (46) extending between the inner cover strip (44) and the outer cover strip (42), and the inner cover strip (44) and/or the outer cover strip (42) having a support portion (48) running in the circumferential direction (UR), each support portion having an axial end face (52). Each support portion (48) on the inner cover strip (44) and/or on the outer cover strip (42) has at least one support portion rib (62) running in the radial direction (RR), which support portion rib is connected to the support portion (48), in particular is formed integrally therewith, and has a rib end face (64), which transitions into the end face (52) of the support portion (48).
