Abstract (en)

[origin: WO2021009641A1] The present invention is related to a system (1) of unlocking of accesses (2) of a structure, said system comprising: - an interface (4a) to a portable electronic device (5), said interface (4a) being configured for detecting the presence of a portable electronic device (5) in proximity of the interface itself (4a), said interface (4a) comprising a receiver stage configured for receiving at least an authentication signal (20, 21), for the request of authorization to unlock the access control device, from said portable electronic device, said authentication signal (20, 21) in turn comprising an access authorization code; - a control unit (4), designed to be in use operatively connected to an access control device (3), wherein: - the control unit (4) comprises a server interface (4c), configured for automatically retransmitting the access authorization code received from the portable electronic device (5) to a remote server (6) and for waiting for an authorization signal from said server (6); - and wherein the control unit (4) is configured for causing at least an unlocking of said lock (3) at the reception of an authorization signal (10e) from the server (6).
