Abstract (en)

[origin: WO2021014265A1] The invention concerns a composition comprising: I. a film-forming constituent capable of producing a condensed orthosilicic acid film after application in the aqueous phase to an external biological barrier and evaporation of the aqueous phase; and II. at least one extract of cell walls of macroscopic edible fungi having an activity when it is applied to an external biological barrier, the composition being capable of forming, when applied in the aqueous phase to the external biological barrier and after evaporation of the aqueous phase, a condensed orthosilicic acid film trapping the constituent (II).
