Abstract (en)
[origin: WO2021008984A1] Furniture component (1) having a functional wall (2) having an integrated or inserted furniture fitting (10) for guiding a movable furniture part (40). The functional wall (2) has two lateral surfaces (3, 4), an end side (5) and an end-side cutout (6) for receiving the furniture fitting (10). The furniture fitting (10) comprises a base element (11), a linear guide (12) and, articulated thereon, a pivoting guide (13). The linear guide (12) has positively guided movable elements on which the pivoting guide (13) is articulated at a distance from the base element (11). The two lateral surfaces (3, 4) lie in a first and a second plane, respectively, wherein at least the linear guide (12), in a closed position (14) of the furniture fitting (10), is situated between the first and the second plane. The linear guide (12) and the pivoting guide (13) are coupled to one another such that, during an opening movement, at first a linear movement and then at least one pivoting movement are carried out.
