Abstract (en)
[origin: WO2021009178A1] The invention relates to a housing assembly for receiving electrical storage means for powering a motor vehicle that can be electrically powered, comprising a base (4), a frame (5) and a cover (6) which can be at least connected to one another and form a receiving space for electrical storage means (3), wherein the base (4) has at least three integrally connected sheet elements (9, 10, 11) made of a metal material, of which a lateral first sheet element (9) has a first average thickness (D9m), a lateral second sheet element (10) has a second average thickness (D10m), and a central third sheet element (11) has a third average thickness (D11), wherein the third average thickness (D11) differs from the first and second average thickness (D9m, D10m).
