Abstract (en)
[origin: WO2021008909A1] A device for transporting valuable notes comprises a first deflection roller (40) mounted in the device (24) and at least one second deflection roller (42) mounted in the device (24) and an endless belt (44) circulating around the deflection rollers (40, 42) and a freely rotatable guide roller (62) which is mounted in the device (24) and has at least one connecting region (84, 86) to be received in a receiving opening (72, 88) of the device (24). In a first receiving position of the connecting region (84, 86) in the receiving opening (72, 88), the rotational axis (78) of the guide roller (62) has a first orthogonal distance from a plane in which the rotational axes of the deflection rollers (40, 42) run. In a second receiving position of the connecting region (84, 86) in the receiving opening (72, 88), the rotational axis (78) of the guide roller (62) has a second orthogonal distance from the plane.
