Abstract (en)

[origin: WO2021013626A1] The invention relates to a method for guiding a motor vehicle (10), which preferably is driven electrically or by means of hydrogen, particularly preferably a utility vehicle. The method comprises the determining of at least one route guidance suggestion from a starting point to a destination on the basis of a break time rule, the current range and energy supply devices between the starting point and the destination. The method comprises the outputting of at least one route guidance suggestion. The method can be advantageous with regard to needs specific to utility vehicles.
