Abstract (en)  
[origin: WO2021023378A1] An image processing device comprising: a processor equipped to apply any of a set of transformations to an image, each transformation transforming a respective visual characteristic of the image, the processor being configured so as to be capable of applying each transformation with any of a range of strengths; the processor being configured to access a memory storing a series of combinations, each combination comprising a plurality of the transformations and a representation of a strength for each of those transformations, and for causing a user interface to present to a user a user interface element whereby a user can select a value in a range; the processor being further configured to, in response to a value being selected through the user interface element, select one of the combinations in dependence on that value and apply to an image the transformations comprised in that combination in the respective strength indicated in the selected combination. The user is thus enabled to choose a strength of an image transformation in a convenient manner.
