Abstract (en)
[origin: EP4000393A1] This aquaculture system (Sy) comprises: mineral sensors (22, 24, 26) that detect the concentration of minerals contained in breeding water in a breeding tank (50) for breeding an aquatic organism or in breeding water in a circulation route (70); and an adjustment part that performs an instruction or an action for inducing the concentration of the minerals in the breeding water to coincide with the standard when the mineral concentration detected by the mineral sensors (22, 24, 26) is out of the standard.
