Abstract (en)
The invention relates to a children's tent with safety snap fasteners for tightening the tent canvas, which includes four obliquely placed vertical slats (F) connected at the bottom with two horizontal slats (E) and with a horizontal slat (G) at the top, and a tent canvas (P). A safety snap fastener (C) is placed on the vertical slat (F), which connects the wooden construction of the children's tent with the tent canvas (P). By applying the safety snap fasteners (C), a part of the tension force is transferred from the wooden construction of the tent to the tent canvas (P). The tent canvas (P) receives part of the load from the construction and depreciates it. This increases the overall stability of the children's tent.
