Abstract (en)
[origin: EP4001153A1] The present invention relates to a container with collapsible side walls, comprising a base (2), on which said side walls (3) are individually collapsed by means of a hinge, and including fixing means between adjoining side walls in the assembled position. The fixing means comprise a trigger part (5), fixed on a side wall, and further comprise a first part (6) and a second part (7), fixed on an adjoining side wall, the second part able to be articulated on the first. The second part comprises a slot (8) for inserting the trigger part during assembly and for removing the trigger part during collapsing, by means of the articulation of the second part on the first. The first and second parts are coupled in an articulated manner and independently fixed on an adjoining side wall, comprising a flexible deformable configuration to enable the second part to be articulated on the first part when exerting pressure on said second part.
