Abstract (en)

[origin: US2022158577A1] A method for estimating the position of a rotor of a synchronous electrical machine, includes a rotor and a stator coupled to an inverted synchronous electrical machine via a rectifier comprising the following steps: measurement of a current i_{abc} circulating in the stator of the synchronous electrical machine; determination of two signals in quadrature i_a ; i_β according to a stationary reference frame from the current i_{abc} and isolation of two filtered signals i_{ah} ; i_{bh} from the two signals in quadrature i_a ; i_β ; demodulation of the two filtered signals i_{ah} ; i_{bh} in order to obtain two demodulated signals i_{aobs} , $i_{\beta obs}$, obtaining of an estimated position {circumflex over (θ)} of the rotor from the two demodulated signals i_{aobs} , $i_{\beta obs}$.

Abstract (fr)

L'invention concerne un procédé d'estimation (1) de position d'un rotor de machine électrique synchrone, comprenant un rotor et un stator accouplée à une machine électrique synchrone inversée par l'intermédiaire d'un redresseur comprenant les étapes suivantes :a. Mesure (11) d'un courant i_{abc} circulant dans le stator de la machine électrique synchrone ;b. Détermination (12A) de deux signaux en quadrature i_a ; i_β selon un repère stationnaire à partir du courant i_{abc} et isolation (12B) de deux signaux filtrés i_{ah} ; i_{bh} ; c. Démodulation (13) des deux signaux filtrés i_{ah} ; i_{bh} à partir des deux signaux en quadrature i_a ; i_β ; d. Obtention (14) d'une position estimée θ du rotor à partir des deux signaux démodulés i_{aobs} , $i_{\beta obs}$.
