Abstract (en)

[origin: WO2021013840A1] The electrode (20, 20') of an improved instrument (10) has a heat dissipation element (28, 28') so that the thermal resistance of the electrode (20, 20') measured in the longitudinal direction (in distal or proximal direction) is preferably  $\geq 300 \text{ W/ (m*K)}$ . In a preferred embodiment, the heat dissipation element (28, 28') is formed by a coating (29, 30, 29') which has a higher electrical conductivity and a higher thermal conductivity than the material of the electrode main part (27, 27').
